

Make Your System

PERFORM

Treefrog
Consulting Ltd.

PROLONG HARDWARE LIFE & SAVE MONEY

A common answer to slow internal software is to purchase faster hardware. Unfortunately the speed increase will rarely exceed 3x while the **cost can run into the millions.**

Code and Algorithm **optimization can provide 5-10 times more value** than buying new hardware and frequently results in performance that is orders of magnitude better.

WE GUARANTEE PERFORMANCE

Don't want to take the risk that we'll charge but not deliver? Engage our team on a performance-based contract where we don't earn a penny unless we **double your speed.**

We wouldn't offer this payment structure unless we felt confident in our ability to remove your bottlenecks. **Try us risk-free** because with Treefrog, you have nothing to lose!

RAPID SOLUTIONS, EASY TO IMPLEMENT

Our typical **engagement lasts 1-3 weeks.** In that time we will identify the bottlenecks in your code and suggest small changes to resolve them.

Customers with large code bases need not worry that we'll spend endless weeks analyzing it all. With profiling tools we can rapidly identify the few areas that need attention and **focus our efforts** there.

KNOWLEDGE TRANSFER

We work extensively with your in-house development team while identifying and resolving speed issues.

Your developers will come away with valuable tools to help them **make future code run at top speed.**
